SANAULLAH

MERN Stack Developer

I'm a MERN stack developer. I specialize in building user-friendly frontend using React and various React frameworks, while also developing robust backend with Node.js.
Leveraging the power of React and its ecosystem, I've successfully designed and implemented intuitive frontends that prioritize user satisfaction and interaction.
On the backend, I excel in creating a solid foundation using Node.js. MongoDB and Express.js are my go-to tools for efficient data storage and server-side application development.
Also proficient in using Next.js to manage frontend and backend together
